

ERP feedback — test report

Power International BD · ERP system · 27 September 2026

This report covers the eight feedback points and the sign-in issue. Each point was fixed or checked, then tested automatically in a real browser against the live system. Screenshots were taken during the tests.

28 / 28

tests passed

0

tests failed

9

feedback points covered (8 + sign-in)

Overview

#	Feedback	Result	Tests
Login	Sign-in needed two clicks	Fixed	3 / 3 passed
1	Zone filter in Dealers (CRM)	Done	3 / 3 passed
2	Credit Sheet PDF looked different from the sheet	Fixed	1 / 1 passed
3	Extra text printed on top of downloaded PDFs	Fixed	4 / 4 passed
4	“Customer” renamed to “Dealer” in the CRM	Done	1 / 1 passed
5	Products a supplier supplies	Done	2 / 2 passed
6	Search suppliers by product name	Done	3 / 3 passed
7	Zone managers only see their own zone	Verified	4 / 4 passed
8	Mobile-friendly, clean interface	Verified	4 / 4 passed

Feedback: Staff had to press “Enter dashboard” twice to sign in.

- Cause: after the first click the sign-in did succeed, but while the dashboard was loading the button changed back to “Enter dashboard” on the login page. On a slow connection it looked as if nothing had happened, so people clicked again.
- The button now stays on “Signing in...” / “Opening dashboard...” until the dashboard appears, and cannot be pressed twice.
- Email and password filled in by the browser’s autofill are now read correctly on the first click.
- The dashboard is pre-loaded while the login page is open, so it opens faster.

Test	What was checked	Result
TC-L.1	one click on "Enter dashboard" signs in and opens the dashboard	Passed
TC-L.2	browser-autofilled email and password still sign in on the first click	Passed
TC-L.3	a wrong password shows an error and the button can be used again	Passed

Observed during the test run

- Dashboard opened 2315 ms after a single click.
- Button states seen after the click: Signing in....

9/27/2026	Classic Polo	Boalia Battery	3	BDT 2,700

Dashboard reached with a single click

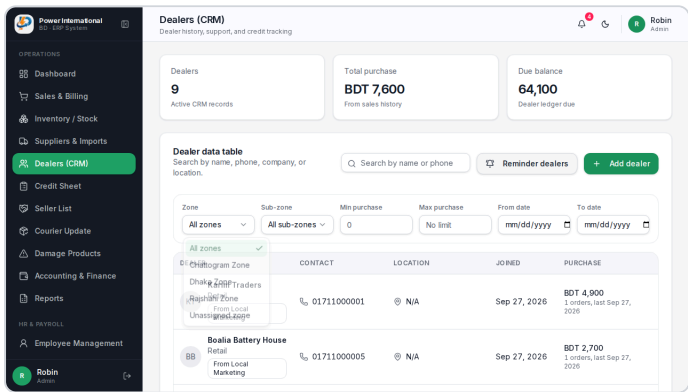

Feedback: The CRM list should be filterable by Zone.

- Dealers (CRM) has a Zone filter listing every zone, plus a Sub-zone filter for the chosen zone.
- Dealers are saved with a zone and sub-zone, and the filters show exactly that zone’s dealers.

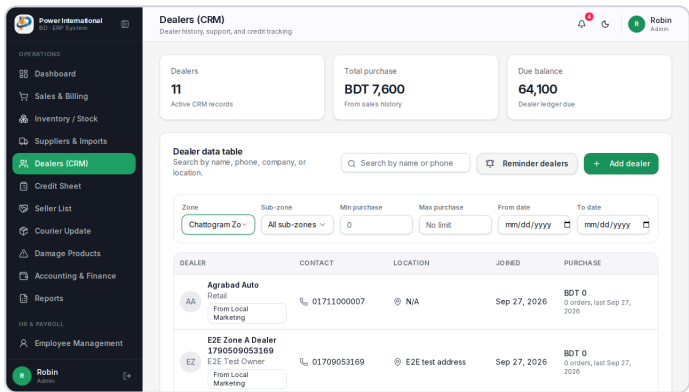

Test	What was checked	Result
TC-01.1	the dealer list has Zone and Sub-zone filters listing every zone	Passed
TC-01.2	filtering by zone and sub-zone shows only that zone's dealers	Passed
TC-01.3	a dealer added with a zone and sub-zone appears under that zone	Passed

Observed during the test run

- Zone filter options: All zones, Chattogram Zone, Dhaka Zone, Rajshahi Zone, Unassigned zone.
- Sub-zone filter "Agrabad" kept the dealer in that sub-zone.
- Dealer saved in Chattogram Zone / Agrabad and listed under that zone filter.

Zone filter with every zone

List filtered to one zone

2 Credit Sheet PDF looked different from the sheet

Fixed

Feedback: Exporting the Credit Sheet to PDF changed its design.

- Export PDF now draws the same layout as the printed sheet: logo and company name, "Credit Sheet" heading, a table per zone with zone totals, and a zone-wise summary with the grand total.
- The file is A4 and its text can be selected and searched. Totals in the PDF match the printed sheet exactly.

Test	What was checked	Result
TC-02.1	Export PDF saves an A4 PDF laid out like the printed sheet	Passed

Observed during the test run

- Exported credit-sheet.pdf: A4 portrait, 1 page(s), with logo heading, zone tables, totals and grand total.
- Grand total row is identical in Export PDF and Print sheet: "Grand total 10 BDT 7,600 BDT 2,000 BDT 64,100".

Credit Sheet in the ERP

Printed Sep 27, 2026, 5:37 PM

Exported credit-sheet.pdf (page 1)

3 Extra text printed on top of downloaded PDFs

Fixed

Feedback: Downloaded PDFs (the Credit Sheet and a dealer's own PDF) showed extra text such as "All zones_Power Int." at the top.

- Cause: that text was the web browser's own print header and footer (page title, date and web address), added whenever a page is saved through the browser's Print → Save as PDF.
- The Credit Sheet (Export PDF), a dealer's ledger (new "Download PDF" button) and the dealer form ("PDF" button in Dealers) are now saved straight to a PDF file, without the print dialog, so the browser can no longer add anything to them.
- The "Print" buttons still open the print dialog, now with the page margin set to zero, which removes the header in Chrome and Edge. Some phone browsers ignore this setting, so the download buttons are the recommended way to save a PDF.

Test	What was checked	Result
TC-03.1	the exported credit sheet PDF has no stray header text	Passed
TC-03.2	Print sheet asks the browser for no page margin, so it has no room for its title/URL	Passed
TC-03.3	a dealer's own ledger downloads as a PDF with no stray header text	Passed
TC-03.4	a dealer's form from the CRM downloads as a PDF with no stray header text	Passed

Observed during the test run

- First lines of the PDF: "POWER INTERNATIONAL BD", "CREDIT SHEET" — nothing above the company heading.
- The stray text is the browser's own print header ("Credit Sheet", date, about:blank). Print sheet now sets a zero page margin, which Chrome and Edge on desktop honour by leaving the header out. Some phone browsers and Firefox ignore it, so files should be saved with Export PDF / Download PDF, which never go through the print dialog.
- Downloaded ledger-E2E-PDF-Dealer-1790509031955.pdf directly (no print dialog): starts with the company heading, no title, date or URL.
- Downloaded dealer-form-E2E-PDF-Dealer-1790509031955.pdf directly (no print dialog), with no title, date or URL on it.

Dealer Signature

Date

Sep 27, 2026

After: dealer form PDF

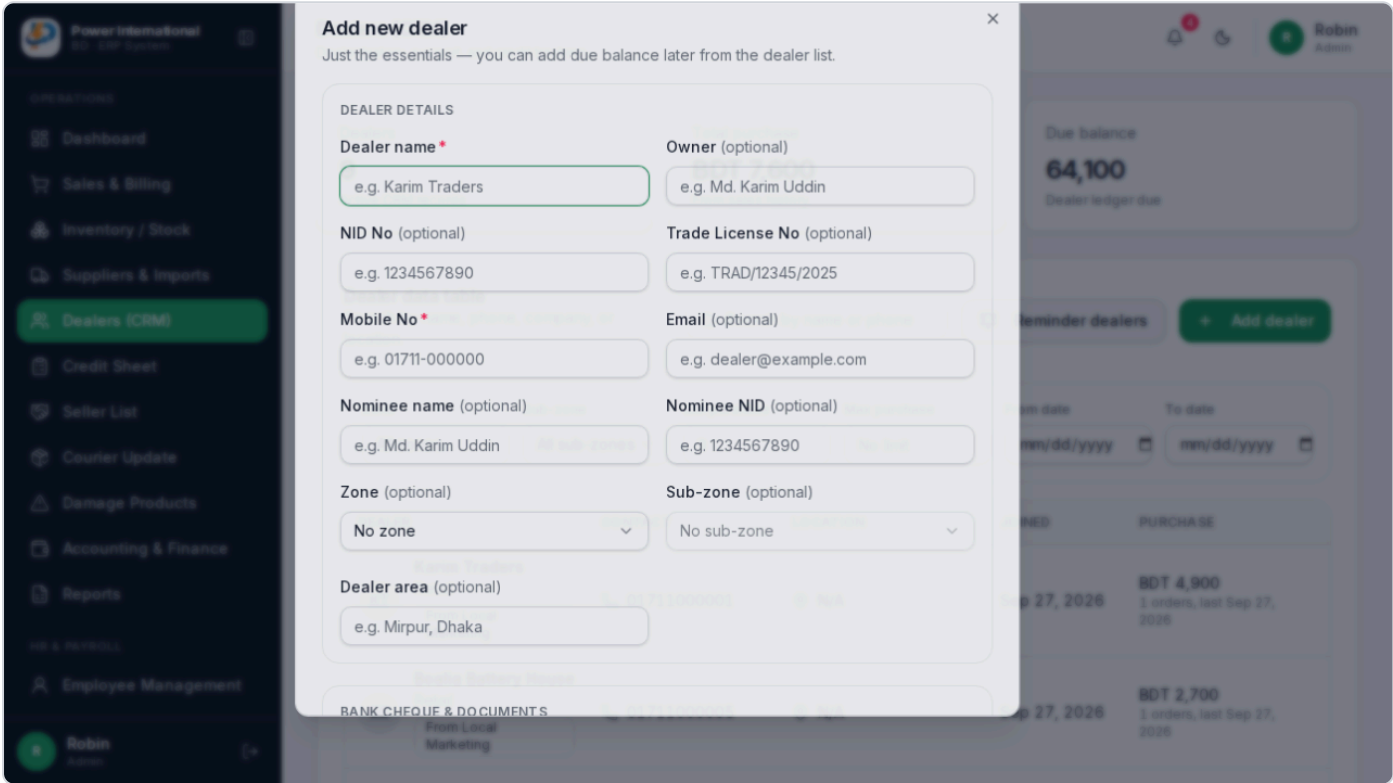

Feedback: The CRM should say “Dealer” instead of “Customer”, since the business works with dealers.

- The menu, page title, summary cards, table, buttons and the add/edit form all say “Dealer”. No “Customer” wording is left on the page.

Test	What was checked	Result
TC-04.1	the CRM speaks of dealers, not customers	Passed

Observed during the test run

- No "Customer" wording found on the dealer list or the Add dealer form.

Dealers (CRM) page

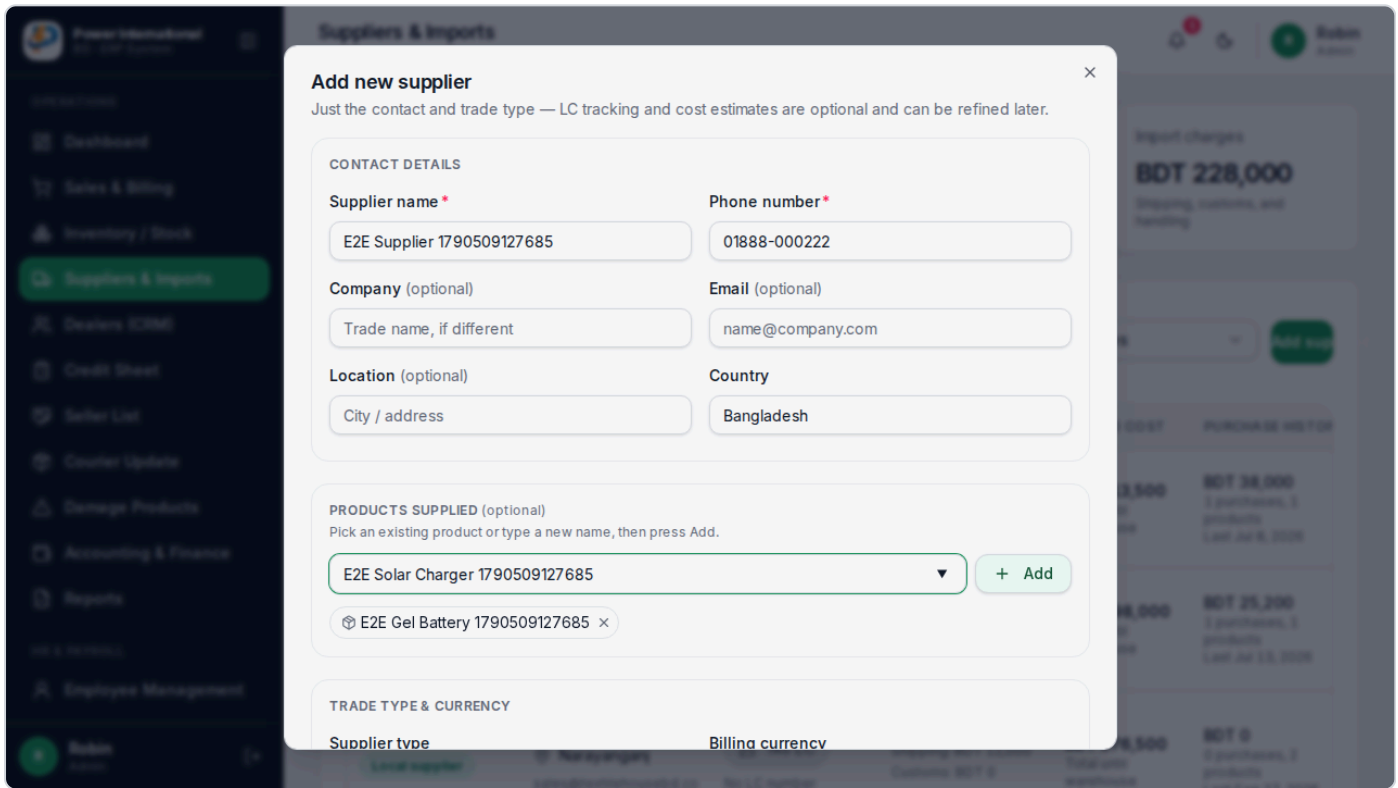

Feedback: When adding a supplier, record which products they supply.

- The Add / Edit supplier form has a “Products supplied” section: pick an existing product or type a new name.
- The products are saved with the supplier and shown under the supplier’s name in the table.

Test	What was checked	Result
TC-05.1	a new supplier can be saved with the products they supply	Passed
TC-05.2	the test supplier can be deleted again	Passed

Observed during the test run

- Supplier saved with products: E2E Gel Battery 1790509127685, E2E Solar Charger 1790509127685.

Products supplied on the supplier form

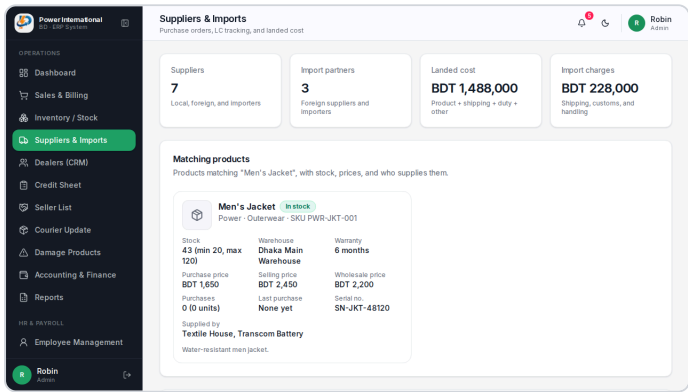

Feedback: Typing a product name in the Suppliers & Imports search should show that product’s details.

- Searching a product shows a “Matching products” panel with stock, warehouse, warranty, purchase / selling / wholesale price, purchase history and who supplies it.
- The supplier table below is narrowed to the suppliers of that product.

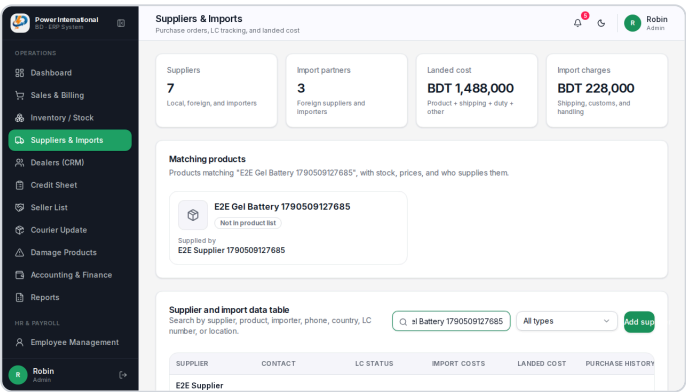

Test	What was checked	Result
TC-06.1	searching a product the supplier supplies shows the product and its supplier	Passed
TC-06.2	searching a catalog product shows its full details	Passed
TC-06.3	a search with no match shows neither product details nor suppliers	Passed

Observed during the test run

- Searching "Men's Jacket" shows stock, warehouse, prices, purchase history and suppliers.

Product details found by name

Supplier found by a product they supply

7 Zone managers only see their own zone

Verified

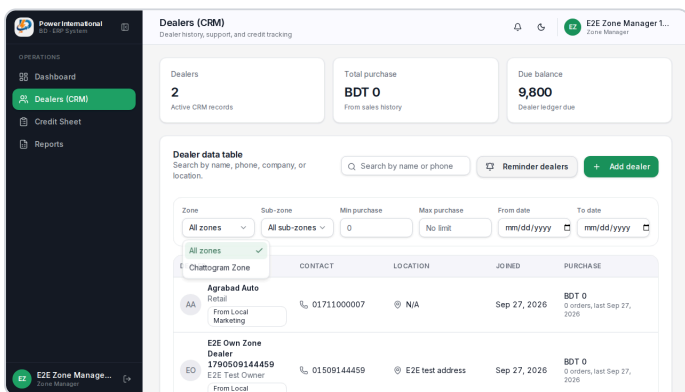

Feedback: A person put in charge of a zone signs in with their own ID and only sees that zone's dealers.

- Tested with a real sign-in: a temporary Zone Manager account responsible for Dhaka Zone was created, used, and deleted again.
- In Dealers (CRM) and the Credit Sheet that person only saw Dhaka Zone dealers; dealers of other zones were not listed, and the zone filter only offered their own zone.
- They cannot open modules they were not given (Suppliers, Finance, User management). An admin still sees every zone.
- A zone is assigned under Credit Sheet → Manage zones ("Responsible"), with the "Zone Manager" role under User & Role Management.

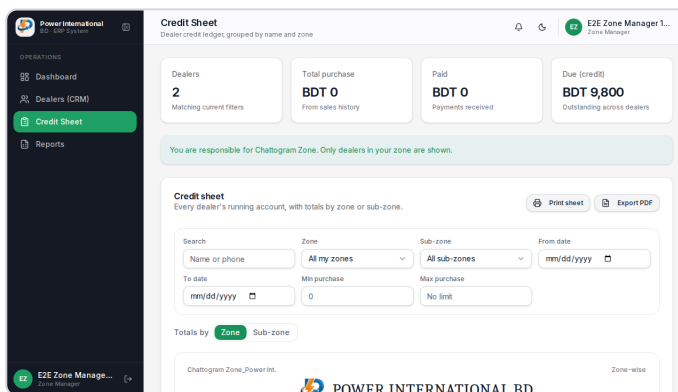

Test	What was checked	Result
TC-07.1	a zone manager sees only their own zone's dealers in the CRM	Passed
TC-07.2	the zone manager's credit sheet only has their zone	Passed
TC-07.3	the zone manager cannot open other modules they were not given	Passed
TC-07.4	an admin still sees the dealers of every zone	Passed

Observed during the test run

- Signed in as a Zone Manager for Chattogram Zone: saw the Chattogram Zone dealer; none of the 7 Dhaka Zone dealers were listed.
- Zone filter only offers: All zones, Chattogram Zone.

Zone Manager's dealer list (own zone only)

Zone Manager's credit sheet

8 Mobile-friendly, clean interface

Verified

Feedback: Most staff use the ERP on a phone; it must work well on mobile and look clean and easy to understand.

- Checked on a common Android phone size (Pixel 7): all main screens fit the screen with no sideways scrolling.
- On phones the sidebar becomes a bottom tab bar (Home, Sales, Dealers, Credit, More) with large, easy-to-tap buttons; “More” opens every other module.
- Readable text sizes, and input boxes large enough that phones do not zoom in when typing. Forms fit the screen and scroll.

Test	What was checked	Result
TC-08.1	every main screen fits the phone width without sideways scrolling	Passed
TC-08.2	phone navigation: bottom tab bar and a slide-out menu instead of the sidebar	Passed
TC-08.3	text is readable: body text at least 14px and inputs at least 16px (no zoom-in on focus)	Passed
TC-08.4	dialogs fit on the phone screen and can be scrolled	Passed

Observed during the test run

- Phone viewport: 412×839 (Pixel 7).
- 7 screens checked, none wider than the 412px screen.
- Bottom tab bar buttons are 64px high; the More menu opens every other module.
- Body text 16px, inputs 16px, font: Inter.
- Add dealer form is 388×807px on a 412×839 screen.

Dashboard

Dealers

Credit Sheet

Suppliers

How the tests were run

- Automated browser tests (Playwright, Chromium) on 27 September 2026, against a production build of the ERP connected to the live database.
- Desktop checks at 1280×720; phone checks on a Pixel 7 screen (412×839).
- Records created for testing (dealers, a supplier, a temporary Zone Manager account) were given “E2E” names, visible in some screenshots, and removed again after the run. A final check confirmed nothing was left behind.
- Downloaded PDFs were checked for page size (A4), content, and that nothing is printed above the company heading.

Existing features re-checked

Area	What was checked	Result
Damage Products	saving without a zone shows an error inside the dialog instead of silently failing	Passed
Damage Products	report, track status, edit, and delete a damage product	Passed
Damage Products	zone filter narrows the table to matching records	Passed

Total run time 129 seconds.
